Product Offering Includes:

- Tanks
- ASME Code Vessels
- Utility Skids
- Reactors
- Scrubbers
- Oxidizers
- Wet/Dry Precipitators
- Heat Exchangers
- Columns
- NOx Control
- Conveyor Systems
- Fabric Filters
- Expansion Joints
- Fans
- Spray Dryers
- Flares

Services Provided Include:

Act as owner's agent for purchase/resale of new and existing equipment.

About ONYX

ONYX Process Equipment, LLC provides innovative, state of the art process and environmental equipment to the industrial and utility marketplace. Representing some of the foremost equipment manufacturers in the world, we not only focus on supplying the highest quality products and services but place a priority on understanding and meeting the individual needs of each and every customer.

Knowledge & Experience

With decades of experience and support from our principals, we are able to analyze your process requirements and develop technically innovative, economical solutions. Let our experience and expertise work for you.

Companies Represented

PROCESS COMBUSTION CORPORATION

Our 50-year history gives us the experience to understand our customer's needs and concerns and design our equipment to solve their problems. We also strive to move forward with a culture that consistently invents new and better ways to do what we do.

AIRCLEAN ENERGY

Experts in design-build solutions for the industrial energy market, we engineer and manufacture our own line of skid-mounted, steam-driven generators (STG's) and integrate them with boilers, heat recovery steam generators (HRSG's) and waste-heat-recovery solutions. Our goal is to optimize your plant's profitability.

AIREM ENERGY

A leading packager and service provider for gas turbines and gas compression equipment. Our diverse management team brings decades of experience to our clients' projects, providing innovative approaches to challenging scenarios.

HEAT EXCHANGER

Since 1986 we have served the petroleum, chemical and energy industries with pressure vessel and heat exchanger production and repair. We've been successful all these years because there are three things we never change: The high level of accumulated skill of our employees, our own high standards of design and workmanship, and our extremely competitive pricing.

GREEN COOLING TOWER SOLUTIONS

The Company produces a patented and proven industrial cooling tower designed to run without electric motors, eliminating the need for costly electrical engineering and infrastructure, routine maintenance of the motors, and most importantly, the cost of powering the motors.

GREEN WATER INNOVATION

Green Water Innovations was founded in 2009 when the group acquired technology for a more efficient process to treat and recycle grey water in commercial laundry systems.

FUEL TECH

A leading technology company engaged in the worldwide development, commercialization and application of state-of-the-art proprietary technologies for air pollution control, process optimization, combustion efficiency, and advanced engineering services.

MUNTERS

A global leader in innovative, energy-efficient and sustainable climate solutions for mission-critical processes. We offer innovative, efficient and sustainable solutions for customers in many different industries where controlling temperature and humidity is mission-critical.

OAKRIDGE BELLOWS

Metal Expansion Joints are our passion; it shows in our engineering, customer service, and manufacturing. If it sounds like we're having fun providing you with the best bellows products money can buy... WE ARE!

PHELPS FAN

Phelps Fan has been manufacturing quality centrifugal fans for a wide variety of industrial applications since 1915. Phelps Fan utilizes the latest in carbon and stainless steel as well as exotic alloy technologies to build custom designs to suit any customer need. No job is too small and no fan is too big.

TRYPSTAR

Our power distribution equipment, cable and generator docking stations are manufactured at a state-of-the-art facility in Faribault, Minnesota. All products are built to last using the highest quality materials, top-of-the-line production equipment and industry-leading engineering practices. Our products last considerably longer and perform noticeably better, even in the most extreme environments, and are tested by 3rd-party laboratories.

VICTORY ENERGY

Victory Energy was started by John Viskup, President and CEO with a single minded mission to provide customers with the best Boilers, Burners, HRSG's, Heat Transfer Solutions and Services. Every action across every day that the company makes has been based on paying off on this core promise.
